Real Pico

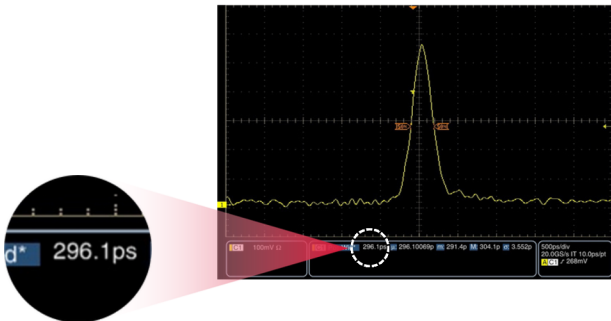

What is PICO PREMIUM and how does it work?

PICO PREMIUM is an advanced laser treatment that helps improve unwanted pigmentations, tattoos, and overall skin Rejuvenation. It uses ultra-fast pulses of laser energy—called “picosecond” pulses—to break down pigment into tiny particles without harming the surrounding skin. These tiny particles are naturally cleared away by your body over time, revealing brighter, clearer skin. In addition to this, its fractional handpiece also stimulates collagen production, which can make your skin look smoother, firmer, and more youthful—with little to no downtime.

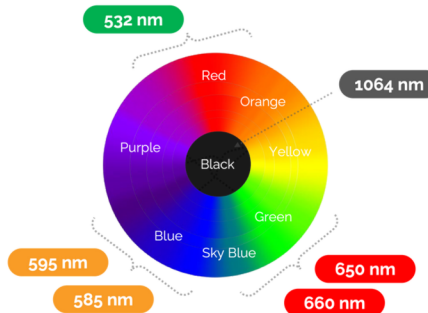

True 300 Pico Pulse duration

PICO PREMIUM has been thoroughly tested to ensure its ultra-fast pulses deliver the right power needed for effective and reliable treatment results.

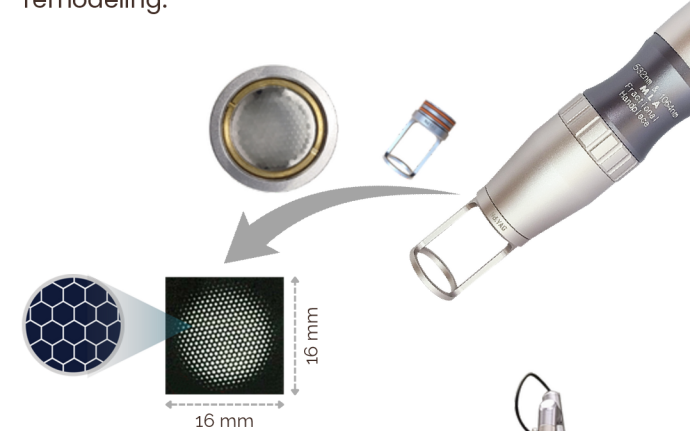

Six Wavelengths

With its diverse array of six distinct wavelengths, PICO PREMIUM is adept at precisely targeting an extensive spectrum of diverse pigments.

Fractional Handpiece

The fractional handpiece equipped with a hexagonal fractional lens produces a grid of 360 micro-spots with exceptionally high intensity, capable of inducing laser-induced optical breakdown (LIOB) within the skin. This process triggers skin regeneration and stimulates dermal remodeling.

Recovery Time

The photos indicate that the recovery time after Fractional Handpiece treatment is relatively short.
