

Frequently Asked Questions

Q: What makes TRIDI different from other laser devices?

A: TRIDI integrates three core technologies in one platform—offering powerful hair removal, skin lifting, and vascular treatments. Its advanced cooling, fast repetition rate, and customizable pulse settings make treatments faster, more effective, and more comfortable.

Q: Is TRIDI safe for all skin types?

A: Yes, TRIDI is designed with safety features and variable settings to treat a wide range of skin types and tones. Your physicians will customize the treatment to match your skin condition.

Q: Is TRIDI treatment painful?

A: Most patients experience only mild discomfort, often described as a warm or snapping sensation.

Q: How soon will I see results from a TRIDI treatment?

A: Some of the patients may notice visible improvement after just one session—especially for skin lifting and vascular lesions. However, optimal results usually develop gradually with consistent sessions.

For Hair, Lift, and Vascular Clarity.

What is TRIDI?

TRIDI is an advanced laser treatment system designed to address multiple skin and hair concerns with one device. Using a powerful **3-Wavelength Technology** (755 nm, 808 nm, and 1064 nm), it targets hair of different colors and depths for fast, effective, and long-lasting hair removal.

It also features **Intelligent Hair Removal** that utilizes AI-powered technology to automatically optimize treatment parameters based on hair type, treatment area, and patient gender.

Beyond hair removal, TRIDI offers skin brightening, tightening, and lifting (BTL) treatments through its signature treatment called **Tridi UP**.

Additionally, with its **TriV** handpiece, TRIDI can also treat vascular lesions—making it a versatile solution for full-face and body care.

For Clinical Photos

1. Scan the QR code.
2. Select TRIDI in 'Search By Device' menu.

3-wave Tech

755 nm, 808 nm, and 1064 nm are considered the safest and most effective wavelengths for hair removal. With 3-wave Technology, these three wavelengths are delivered simultaneously, targeting different tissue depths and specific structures within the hair follicle for optimal results.

- High melanin absorption
- Ideal for fine and light-colored hair
- Moderate melanin absorption
- Penetrates deeply, targeting the hair bulb
- Low melanin absorption
- Reaches the deepest, targeting the hair bulb

Intelligent Hair Removal

Intelligent Hair Removal (IHR) utilizes AI-powered technology to automatically optimize treatment parameters based on hair type, treatment area, and patient gender.

This reduces treatment time while enhancing safety, effectiveness, and patient comfort with high precision.

TriV Vascular Handpiece

The TriV option enables precise and effective treatment of vascular lesions, such as telangiectasia.

Tridi UP

Tridi UP is TRIDI's signature treatment that combines its unique Stacking and Dynamic Modes to deliver powerful results. This signature procedure enhances skin by brightening skin tone, tightening sagging areas, and lifting facial features for a more defined look.

Stacking Mode
Delivers multiple stacked pulses to a single spot for enhanced depth and thermal effect.

DynaMotion Mode
Emits multiple continuous pulses while in motion, allowing for uniform energy distribution over larger areas.

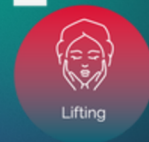

TridiUP

Brightening

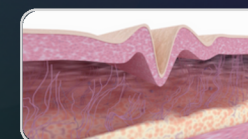

Tightening

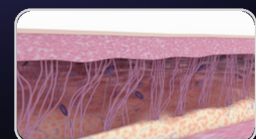

Lifting

After Tridi UP treatment, collagen remodeling is activated, promoting new collagen formation. This process helps brighten the skin tone, tighten loose areas, and enhance facial contours.
