

## Frequently Asked Questions

**Q: Is the treatment painful?**

A: Most patients describe the sensation as a light snap or warmth on the skin. The HRZ-6000 features a contact cooling system to enhance comfort during treatment.

**Q: How many sessions will I need?**

A: Hair grows in cycles, so multiple sessions (typically 4–6) spaced a few weeks apart are needed for optimal, long-lasting results.

**Q: Is it safe for all skin types?**

A: Yes, the HRZ-6000 is designed to treat a wide range of skin types safely, thanks to its adjustable settings and advanced cooling system.

**Q: Are the results permanent?**

A: Laser hair removal with the HRZ-6000 offers long-term hair reduction. Many patients experience permanent results after completing the recommended sessions, though occasional maintenance may be needed.

Say Goodbye to Shaving — Hello to Smooth Skin!

## Diode Laser - The Safest and Most Effective Hair Removal

The diode laser is considered the safest and most effective hair removal laser.

Additionally, it is known for its long-term durability and stable energy output.

With short treatment times and no need for consumables, it provides a convenient and efficient solution for hair removal.

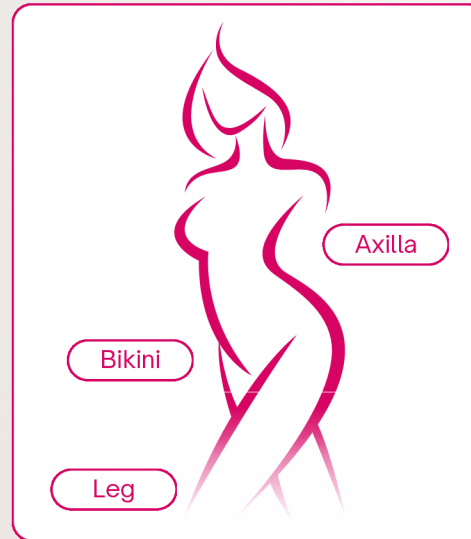

### 3 Wavelengths - 755 nm, 808 nm, 1064 nm

The three wavelengths – 755 nm, 808 nm, and 1064 nm – are considered the safest and most effective for removing both thick and thin hair due to their high absorption rate of melanin.

This makes them suitable even for dark skin, with minimal discomfort and risk of skin burns.

## Recommended Areas for Hair Removal

Common treatment areas include axilla, bikini, leg, beard, chest, and more.

Ask your provider which areas are best suited for you.
