BODY

GRAFT / PROSTHESIS
BIOMATERIAL

① Safety

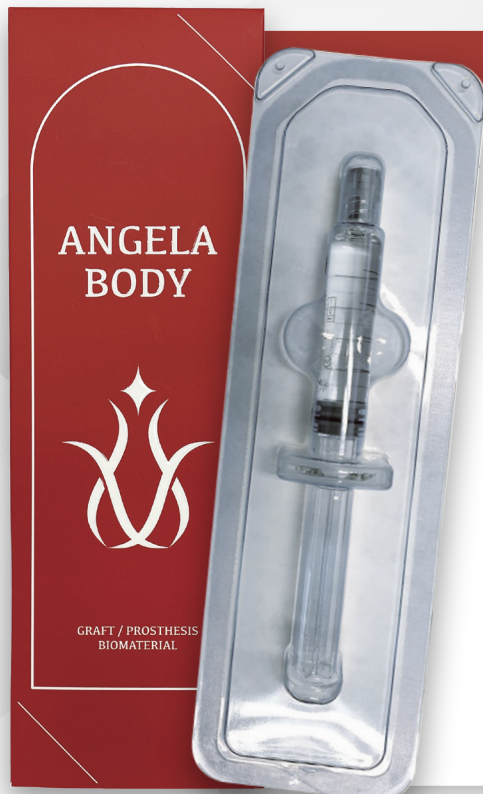

Minimize free radical (Hydroxyl radical) production by significantly reducing the amount of Protein load that causes hypersensitivity reactions

② Optimum impregnation

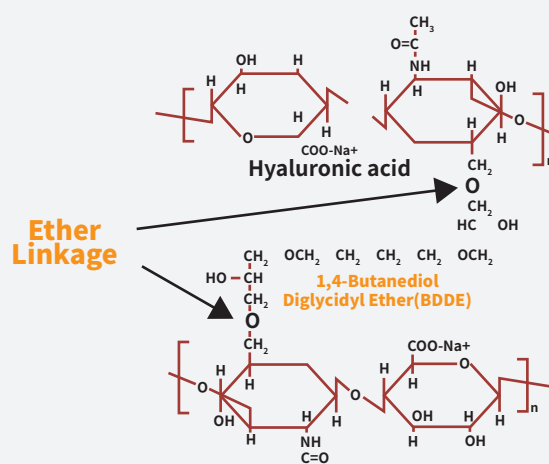

High purity HA with uniform particles is combined with special thin needle and Perfect Griff Syringe to provide an optimal injection feeling.

③ Good durability

Using high purity HA made through Network Control Technology, the persistence and elasticity of the body are remarkable.

Network Control Technology

✓ Adjust the network configuration of the HA to complete a special HA with high elasticity and viscosity
